The scheme of decoration in the centrepiece is followed in the ladic, the ewer,
the two comportier, or cake dishes, the
two bon-bon dishes, and the twenty-four

The comportitive drill will take place punch cups.

A punch bowl, massive and rich in design, will be the trophy rewarding the winning troop in the mounted command-ery drill. The size of the bowl is 17 by 11 inches. It is made in sterling silver, finished in rich style and with heavy ap-plied borders. On the front of the bowl is a true representation of the Louisville Masonic Widows' and Orphans' Home and on the reverse side appears a large shield, on which will be written the name of the winning commandery. The LOUISVILLE, Ky., June 1.—It will be shield, on which will be written the name of the winning commandery. The something worth marveling at if the Knights Templar of Washington do not be winning commandery. The ladle is finished in the same style as the bowl, its handle representing an ancient knight's armor.

No city in the country will send a bigger representation to the celebration than the commander of the Direct of Columbia have engaged quarters for centered week. Each of the further celebration than the compatitive drill, which promises to be contained to a still-fined case of antique of the meeting, second in importance only to the grand parade on the opening day. Washington Commander, No. 1, and Orient, No. 5, have both leasest, and far from the compatitive of the contained the contain

NOT OFFICIALLY REPORTED. No Confirmation Yet of Gordon's Ar.

rest in Russia.

It was stated at the State Department yesterday that the report of the arrest of S. J. Gordon, an American citizen, and formerly the Russian agent for the Baldwin Locomotive Works, had not been officially confirmed. Gordon is said to have been imprisoned by the St. Petersburg authorities because of some trouble growing out of a difficulty between himself and his wife, a Russian woman, from whom he had separated.

Gordon's brother, Henry J. Gordon, of Guttenberg, N. J., has been in Washington recently in regard to the case and has been made acquainted with the attitude of the State Department with respect to it.

From what was learned yesterday by enquiry at the department, it appears that Simon James Gordon was a Pole, but became a citizen of the United States. A

Movement Set on Foot by Dr. How.

WAR AGAINST MOSQUITOES

Means by Which the Pest May Be

Exterminated.

ard, of the Department of Agriculture-Kerosene Oil Effective When Cast Upon the Waters.

Dr. L. O. Howard, Chief of the Division of Entomology of the Agricultural Department, has been the principal instigator of a movement in sections of Long Island, New York, New Jersey, and Virginia looking toward the extinction of the nosquito. As the result of a paper written by him a year ago, certain towns and clubs have united to apply the remedies Dr. Howard has suggested. The result has in every case been successful, and localities previously almost uninhabitable have since been made delightful to live in.

"As a result of the enforcement of measures determined upon," - said Dr. Howard, "we hope to attain the practical extinction of mosquitoes. The health of the community will be improved in consequence. Real estate values will rise and ground in the vicinity of New York, now practically worthless, will become spiendid sites for homes.

"The measures for eradication of mosuitoes are simple. Mosquitoes breed in marshes, which should be drained, if possible, and if not, should be well kerosened. The larvae are destroyed by the use of the oil. An association has been formed on the north coast of Long Island, the avowed purpose of which is to exterminate mosquitoes, the area covered Including Oyster Bay, Cold Springs, and other points. Centre Island, the site of the club house of the Sewanhaka Yacht Club, has been badly infested with mosquitoes. The club has decided to destroy the pest. An expert has located the breeding places, and these will be drained. "Other points, which it is impracticable

to drain, will be sprinkled with kerosene. I have been invited to go to South Orange, N. J., to consult with the authorities there in relation to the extermination of mosquitoes. Summit, N. J., and Richmond Hill, Long island, are taking considerable interest in the matter, and also expec, to do their share toward the extermination of mosquitoes. The geologist of the State of New Jersey has made a map of the Hackensack Meadows, portions of which are within the jurisdiction of Jersey City, Newark, and Elizabeth. I understand these cities are taking measures for draining the swamp lands. These lands when ing the swamp lands. These lands when drained will be valuable for truck farming purposes, and as sites for factories, and incidentally the disease spreading mosquito will be deprived of another breeding place.

"There is no doubt that at any place

There is no doubt that at any place where mosquitoes exist they can be wiped out if only money is available for the purpose. Of course it is a much easier purpose, Of course it is a much easier problem in some places than in others. There is a thorough campalign in progress in Winchester, Va. An ordinance was passed last year providing for the draining and kerosening of swamp lands and other places where mosquitoes breed, but it contained no penalty clause. In those sections where the ordinance was observed beneficial results followed. So satisfied are the authorities that the pest can be destroyed that this year they have endestroyed that this year they have en-acted a new ordinance containing a pen-aity provision, requiring the draining of that is impossible, the use of kerosene. "It has been found in Cuba that the mosquito disseminates yellow fever. In mosquito disseminates yellow rever. In the United States they inoculate people with malarisi diseases. The authorities are kerosening places which cannot be drained in Cuba, and mosquito bars are used in all barracks in the island. "The State of New Jersey has an un-

"The State of New Jersey has an unenviable reputation in connection with
mosquitoes. While it is undoubtedly true
that mosquitoes are very abundant in
most parts of the State, that fact does
not prove that in the greater part of the
State there are any more breeding spaces,
or that mosquitoes are any more prolific
in New Jersey than elsewhere. It does,
however, seem that there is constant migration inland from marshy seacoast of
very many mosquitoes not due solely to very many mosquitoes, not due solely to wind or that they fly any great distance." Railroads are, Dr. Howard believes, responsible to a great degree for the ap-pearance of mosquitoes in parts of the State not favorable otherwise to the breeding of mosquitoes in quantities such as would account for the number of the pests, which frequent these localities. He pests, which frequent these localities. He says: "There are various means of conveyance, and of these, railway trains seem to be the most important. All through the summer evenings many trains are started inland from Wechawken, Hobken, Jersey City, South Amboy, Long Branch, Atlantic City, Ocean City, and Cape May, N. J. Many of the cars contain mosquitoes by the hundreds. In this way unlimited quantities of mosquitoes are carried unlimited distances, and, emerging from the cars will start to

emerging from the cars, will start to breed even in localities where mosquitoes are ordinarily rare, or would be rare, under ordinary circumstances. In this way even mountain resorts will get their sup-ply of lowland mosquitoes, and with the improvement of railway service and the increase in number of through cars the danger is constantly increasing." Dr. Howard refers to an instance in the Catskill Mountains, in New York, where

the infestation of a previously uninfested place could have been brought about in no other way than this. Through parior and through baggage cars now run from Jersey City and Wechawken into the heart of the Catskills and through trains from Boston into the White Mountains. In the same way through cars run from Bultimore into the Blue Ridge, and thus a constant source of supply may be, and undoubtedly is, kept up, declares Dr. Howard. The doctor continues: "Mosquitoes lay their eggs in the water

of stagnant pools and marshes. They are laid in masses similar to frogs' eggs. In number they may range from 200 to 400. As seen from above, the egg mass is grey brown; from below, silver white, the lat-ter appearance due to the airy film. It seems impossible to wet these egg masses. They may be pushed under wa-ter, but come up apparently as dry as ter, but come up apparently as dry as ever. The egg mass separates rather regularly, and the eggs are not stuck together very firmly. After they have hatched the mass will disintegrate in a few days, even in perfectly still water. Repeated observations show that the eggs hatch under advantageous conditions, certainly as soon as sixteen hours. tions, certainly as soon as sixteen hours. Water buckets containing no egg masses, placed out at night, were found to contain egg masses at 8 o'clock in the morning, which were probably laid in the early morning before daylight. The young mospatic or large seames from the egg quito, or larva, escapes from the egg from its under end, or the bottom of the egg, that is immersed in the water. It has a big head, with numerous bristles growing out of it. These bristles are in constant motion and assist the larva in moving about and in directing food to its

mouth.

"As a rule the larva, which is an airbreathing insect, keeps its head out of the water. It is very active in its movements and is the 'wiggle' children know of, in the family rain barrel at the back part of the house. They remain in the larval state about seven days and then enter the pupal stage of their existence, which is a stage halfway between the larva and the fully developed mosquito. The insect remains in this stage two days and then becomes a mosquito in fact. The individuals emerging on the first day are invariably males. On the second day the

"The Record-breaking" Sale of Ladies'

OXFORDS At \$1.98 & \$2.49.

June is one of the biggest months of the year in our business-and this season we propose to make it a "recordbreaker." We'll start the ball-of-trade-a-rolling wi'n a great sale of Ladies' Oxfords. In the lot are all the swell and stylish shapes that others are showing at \$3 and \$3.50. Crock-

posit of eggs in the water, but the remedy that has been most efficient, both as to efficiency and ease of application, is kerosene oil. The method of application varies with those applying it. Some use a spray pump, others pour it on to the water and let it spread of itself, others get into a boat and with a rag dipped frequently into a pail of kerosene, swab the surface of the pool or pond until the entire surface is covered with the oil. Several ponds can be effectively treated in this way in an evening. Community work, if carried to a rational extent of effort, will be the best means to either exterminate mosquitoes from a neighborhood or render their presence a rarity, an exception

their presence a rarity, an exception rather than of common presence." RECENT ARMY ORDERS.

lar Establishment Made.

The following army orders were issued at the War Department yesterday: By direction of the Secretary of War, Major Frank B. McKenna, inspector general, U. S. Volunteers (captain, Twentyeighth U. S. Infantry), is detailed as a member of the examining board convened at Chicago, by Special Orders, No. 102, May 2, 1901, from this office, vice Lieut, Col. Abiel L. Smith, Deputy Com-

By direction of the Secretary of War, Contract Surgeon Joseph L. Bell, U. S. A., now in this city on leave of absence, is relieved from further duty at Fort Crook, Neb., and will proceed to Fort Morgan, Ala., and report in person to of the armorial, or, rather facial, bearthe commanding general, Department of ings of certain celebrated chiefs, and it the East, to telieve Contract Surgeon is said to be fascinating work. By direction of the Secretary of War, Coi. James N. Wheelan, Twelfth U. S. Cavalry, is detailed as a member of the examining board convened at San Antonio, Tex., by Special Orders, No. 162, May 2, 1901, from this office, vice Coi. Chambers McKibbin, Twelfth U. S. Infantry, hereby relieved.

By direction of the Secretary of War, First Lieut. Alfred T. Clifton, Signal Corps, U. S. Army, recently appointed, is relieved from duty in the Philippine Islands, to take effect as soon after July 1, 1901, as practicable, and will then proceed to Angel Island. California, and assume command of the Signal Corps detachment at that post.

HERALDRY OF THE INDIANS

Significance of the American Red Man's Painted Visage.

Marks on the Face Which Denote Personal Honors, Ancestry, Tribe, and Condition - A Peculiar Art Which Is Difficult of Interpretation

People in general have been content to ok upon the Indian's adornment of his head with eagle's feathers and his face Transfers and Details in the Regu. with paint as marks of personal decoration inspired by vanity and a savage taste, different only in degree from what is sometimes witnessed among those highly civilized peoples. But the fact is that, in preference to the latter custom for instance every paint mark on an Indian's face has a sort of heraldic meaning, implying not only the honors won by the brave in person, but representing also the claims of his family and race to distinction. In other words, what is shown missary General, U. S. A., hereby reliev- among more cultured communities by coats of arms, orders, and decorations is

lepicted by the Indian on his face by means of pigments. Scientists are now engaged, among other novel investigations concerning the North American Indian, in compiling a record possession of huge mines of copper. Another individual will have his forehead adorned with a painting of a certain fish. thus implying that he, or his people, are renowned for prowess in catching fish. wears a disc of pearl in addition to his paint mask. This, by its shimmering radiance, and its form implies that he is descended from the moon, in the sense that the "goddess of night" is one of his

The fact that the Indian has no conception of perspective seriously handicaps the success of his efforts at pictorial art. Indeed, the Indian limner merely alms to show the most characteristic portion of the object he attempts to tainment, in which case he divides or dissects the subject of his picture and represents the whole by its parts, the latter being arranged entirely irrespective

of the natural sequence.

The features of the Indian are sometimes incorporated into the representation of the animal which forms his heraldic bearing. Should the beaver, for form of the animal, but only its distinctive and typical parts, as, for instance, its peculiar tail, which is painted in criss-cross lines extending from the chin to the nose, as though standing upright. The chin itself does service as the

The arbitrary methods of the Indian armental commander, who will promptly report the assignment by letter to this office.

By direction of the Secretary of War, First Lieut, James Hanson, Fourth U. S. Infantry, is transferred to the Fourth U. S. Infantry, and will proceed to join that regiment. He will be assigned to a company by his regimental commander, who will promptly report the assignment by

the manner conventional in Indian carvings.

The doglish painted in red on the face designates the members of an entire tribe. On the foreheads of the members of this tribe is painted the long thin snout, the gills are represented by two curved lines below the eyes, while the tail is shown as cut in two and hanging from each nostril. Only one or two parts of an animal painted on an Indian's face indicates that he is of inferior position—the entire symbol, no matter in what form represented, is significant of lofty station, and high honors.

honors.

The facial heraldry of the Indian may be said to be unique, not alone in the method of representation employed, but in the subjects selected. These latter include fish, flesh, and fowl of all descriptions-dog-saimon, deviliab, starfish, woodpeckers, ravens, eagles, pears, wolves, frogseven mosquitoes are comprised in the ansorial gallery.
